

Ejemplo inicial y ejercicio de count(3)

```
PS C:\Users\ASUS\OneDrive\Desktop\practica-jacamo_siax\practica-jacamo_siax\practica-jacamo> .\gradlew.bat -q --console=plain run "-Pmas=hola.jcm"
```

Using the jason.jar from classpath

```
Runtime Services (RTS) is running at 192.168.56.1:49287
Agent mind inspector is running at http://192.168.56.1:3272
CArtAg0 Http Server running on http://192.168.56.1:3273
[Cartago] Workspace w created.
[Cartago] artifact c1: example.Counter(3) at w created.
[bob] join workspace /main/w: done
[bob] focusing on artifact c1 (at workspace /main/w) using namespace default
[bob] focus on c1: done
[bob] hello world.
¿Desea terminar el trabajo por lotes (S/N)? |
```

The screenshot shows a web browser window at localhost:3272. The page title is "Inspection of agent bob (cycle #62)". On the left, under "Agents", agent "bob" is listed with a link to "by Jason". The main area shows "Beliefs" for agent bob, listing several JSON-like objects representing its knowledge, including counts, focus states, and workspace information. Below the beliefs, there are sections for "Annotations" and "Status". At the bottom, there are links for "hide annotations" and "plan library".

comunicación entre agentes

```
PS C:\Users\ASUS\OneDrive\Desktop\practica-jacamo_siax\practica-jacamo_siax\practica-jacamo> .\gradlew.bat -q --console=plain run "-Pmas=paso1.jcm"
```

```
Runtime Services (RTS) is running at 192.168.56.1:61852
